

ABOUT SAJOREC

Sino-Africa Joint Research Centre (SAJOREC) in JKUAT is an international collaborative Centre which focuses on biodiversity conservation and research.

SAJOREC offers state-of-the-art conferencing and accommodation facilities to the general public.

Our facility is located in a well-landscaped 40-acre botanical garden with six theme gardens which provides our guests with a splendid view of rare, exotic and local plants.

The botanical garden has 3 artificial lakes with unique aquatic plant and bird species.

CONFERRING AND ACCOMODATION

SAJOREC has state-of-the-art conference and accomodation facilities. The main conference hall has a sitting capacity of 300 participants with an ergonomic design, wireless connectivity, state-of-the-art public address system and projection equipment.

The centre also boasts of comfortable air conditioned luxurious accomodation.

The guestrooms are in three categories i.e Executive, Deluxe and standard to suit the needs of our different clientele. Separate kitchenettes are provided for our guests who prefer to make their own meals. Executive guestrooms have a fully-furnished living room and a private balcony. All guestrooms have a WI-FI connection and DSTV.

RESTAURANT

SAJOREC cafeteria has highly trained and experienced staff with speciality in African and Asian cuisine. The team regularly provides catering facilities for large groups such as weddings, corporate team building events, church retreats etc.

A spacious, natural and serene environment ideal for holding memorable events including weddings, corporate team building events, church retreats, school trips

BOTANICAL GARDEN

The Botanical garden offers spacious, natural and serene environment ideal for holding memortable events including weddings, corporate team building events, church retreats, school trips. It also serves 4 main purposes:-

1. Provide new plants of economic importance to society including medicinal, ornamentals, trees for forestation and plants for industry, fruits and cash crops.
2. Keep plants for study of growth, adaptability, economic and genetic characteristics.
3. Disseminate cultural and scientific information about plants.
4. Preserve endangered and rare plants while investigating methods of conservation.
