

Affiliation: Jomo Kenyatta University of Agriculture and Technology,
Department of Medical Laboratory Sciences

Specialization: Clinical Histopathology and Diagnostic Cytology

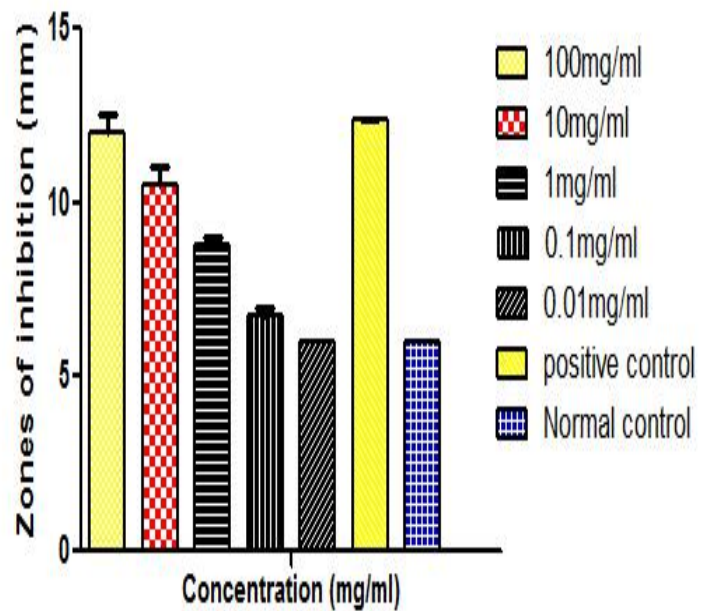

Research interest: To come up with diagnostic tools for early detection of cancer hence reducing cases of mortality and prolonging life.

Goal: Treating Cancer

Research projects

Solanum incanum fruit Project

This was a multidisciplinary project done in JKUAT. The goal was to find an alternative regimen for wounds mainly caused by *Staphylococcus aureus* which is notorious for its ability to become resistant to antibiotics and hence threatening the effective treatment and prevention of infections.
